

$$\frac{(3x+1)}{x} + \frac{5}{(x-2)} = \frac{(6x-2)}{(x^2-2x)}$$

$$\frac{(5y+13)}{(5y+4)} - \frac{(4-6y)}{(3y-1)} = 3$$

$$\frac{21}{(x+1)} = \frac{16}{(x-2)} - \frac{6}{x}$$
